Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 63-65 and 78 are rejected under 35 U.S.C. 102(e) as being anticipated by US Publication 2003/0231534 Tamaki.

As per claim 63, Tamaki teaches the claimed method comprising:
determining a condition of a memory device, the memory device including a plurality of memory segments (Abstract), each of the memory segments connecting to a corresponding internal node of a plurality of internal node to receive a supply source from the corresponding internal node; isolating a selected memory segment of the memory segments from the corresponding internal node connected to the selected memory segment if the selected memory segment is defective to prevent the selected memory segment from receiving the supply source at the corresponding internal node connected to the selected memory segment; and replacing the memory segment with a redundant segment if the selected memory segment is defective (Paragraphs [0018-0019]).

As per claim 64 Tamaki teaches determining a condition of a memory device includes detecting for a defect in a memory array of the memory device. (Paragraph [0004])

As per claim 65 Tamaki teaches isolating the selected memory segment includes electrically disconnecting the selected memory segment from the corresponding internal node connected to the selected memory segment. (Figure 2 Paragraph [0041])

As per claim 78 Tamaki teaches isolating the selected memory segment includes isolating a number of static random access memory (SRAM) cells of the selected memory segment from the corresponding internal node connected to the selected memory segment (Paragraphs [0091-0095])
